# Bounce Back

The first electrolyte syringe made with same balanced saline solution given to human shock victims - with correct mineral ratios for equine athletes!

Developed for Endurance Racing, each syringe contains 3 - 26cc. doses to replace minerals at twice the quantity they are lost in heated competition to ensure proper absorption.

Less expensive per dose than the competition and every ounce can be absorbed by the horse in a tasty paste.

- SUPER PROFIT MARGIN
- AGGRESSIVE AD CAMPAIGN
- ORTHO-FLEX TO SUPPORT YOU.

- The stressed, dehydrated horse can absorb Bounce Back more safely than homemade electrolyte mixes because Bounce Back delivers the critical minerals in intravenous grade chloride form -

7.2 gm. each of Sodium Chloride  
 Potassium Chloride  
 Magnesium Chloride  
 Calcium Chloride

Unlike other electrolyte syringes Bounce Back contains these quantities per dose. The horse gets enough.

- Also contains Winners Choice Chelated Minerals which facilitate enzyme action in digestion, begin restoration and aid absorption of electrolyte.
